## FOUR LENS POSITIONS TO ADJUST BEAM ANGLE

With the EFFI-Flex2-IP67, users can customize the light beam angle. The default position is P2, but alternate specifications are available upon ordering: placing the lenses closer to the window narrows the light angle.

Polarizer

Without polarizer
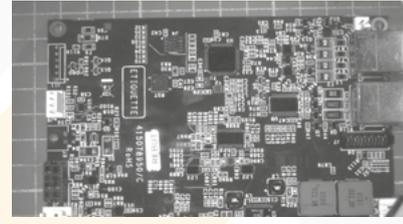

With polarizer

Using polarizers, on the Effilux light and on the camera, helps acquiring suitable images by eliminating glare issued from the workpiece .

The polarizer film is positioned just under the window on demand when ordering.
**Important note**: The polarization is optimal with a TR window, the use of diffuser (SD or OP) can depolarize the light.

Linescan configurations

Linescan film (TR-P3-LS)
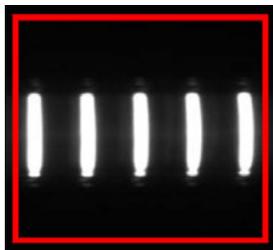

Without Linescan film
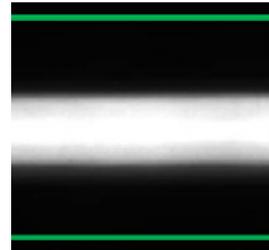

With Linescan film

With the lens in the upper position (P3) and the transparent window (TR), the linescan filter accessory transforms the EFFI-Flex2-IP67 into a uniform line light ideal for either brightfield or darkfield illumination.

OVERVIEW

The EFFI-Flex2-IP67 has been designed to have several electronical modes available in the same product. Additionnally to that, engineers have developed a strong AutoStrobe mode to reach 450% light intensity.

Thus, EFFI-Flex2-IP67 can be used to have a:

- **High power strobe - Autostrobe mode:** Light intensity at 450%. Max duty cycle of 30% and max pulse duration of 245ms.
- **DIM modes :** Light intensity between 20% and 100% monitored with the AIC pin and strobe or continuous mode monitored with the trigger pin.

AutoStrobe

Dimmable Strobe

Dimmable Continuous
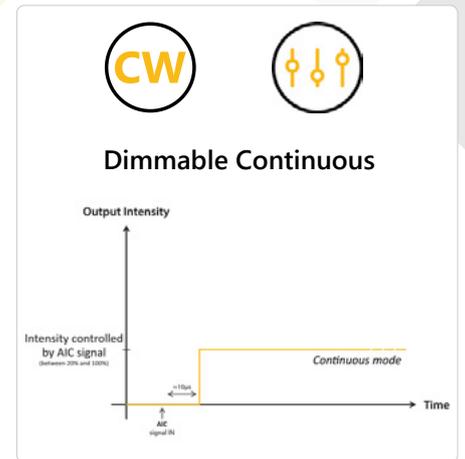

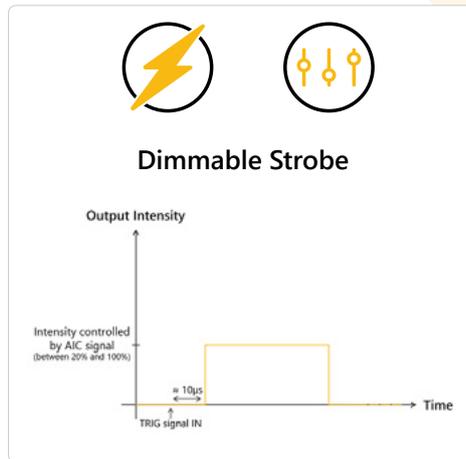

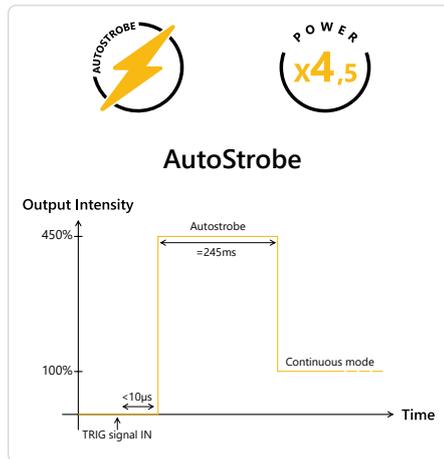

ANALOG INTENSITY CONTROL (AIC)
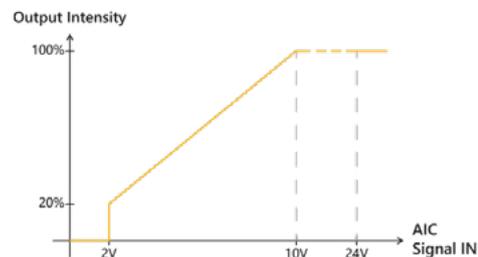

- The output intensity can be adjusted from 20% to 100% by applying a signal from [2V-10V DC].
- If V_{AIC} = [0V-1V DC] or if not connected, the EFFI-Flex2-IP67 is in AutoStrobe mode by default.

M12 - 5 pins	M12P - 4 pins	2x M12P - 4 pins

Wiring layout

Depending on the size, the light comes with different connectors (refer to the table above).

M12 (A-coded)- 5 pins
male connector
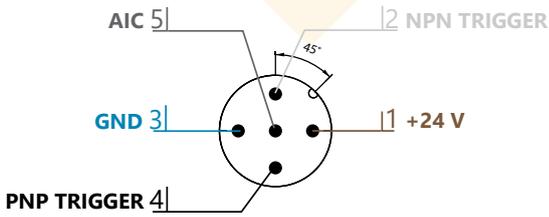

M12 Power (T-coded) - 4 pins
male connector
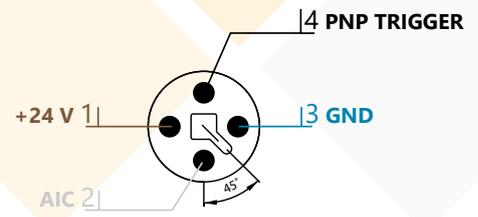

Notes:

- The EFFI-FLEX2-IP67 requires 24V DC input power.
- PNP trigger pin (or NPN) needs to be connected either to a trigger signal for AutoStrobe and Strobe mode or to a continuous signal for Continuous mode.
- AIC pin can stay unplugged for Autostrobe mode, or tied to +24V for continuous mode at maximum intensity.
- (*) For light requiring M12P connector, the NPN trigger is optionnal. With the NPN option, the PNP trigger input is replaced by the NPN trigger input.

Layout example (PNP)

	AutoStrobe	Dimmable Strobe	Dimmable Continuous
M12			
M12P			
2x M12P	• When the 2x M12P configuration is required, a second M12P is added on the opposite cap with power inputs only. • The second M12P has black nut to easily indentify it. • **Warning:** Both GND must be connected together		
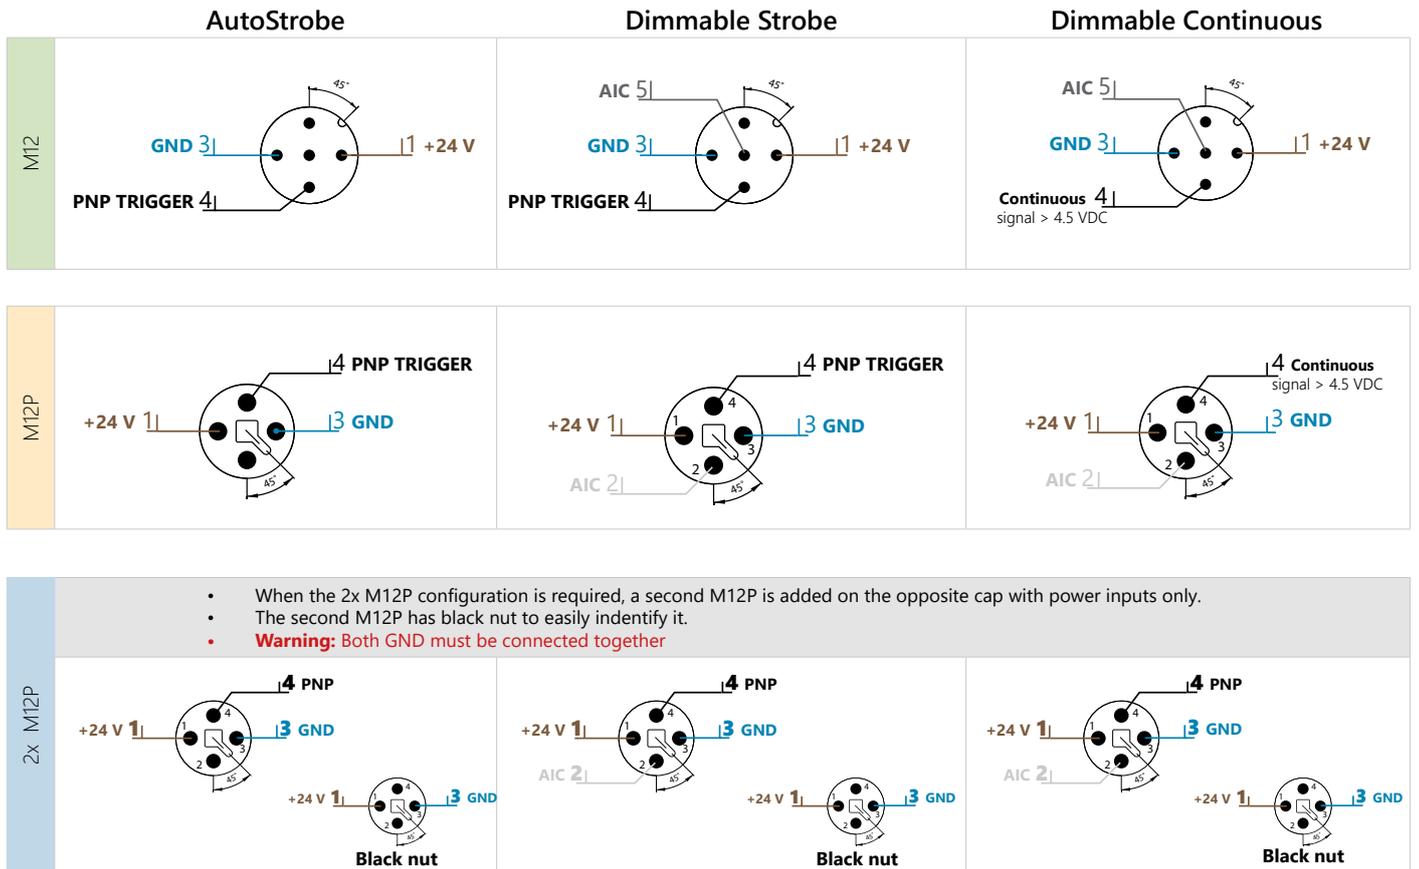

# Continuous power boost (only with WTR version)

With the ELS500, ELS700 and ELS1000 options the EFFI-FLEX2-IP67 light power can be improved for continuous use.

These configurations only work with the WTR version as extra heat is produced.

As this is an expert configuration, get in touch with Effilux before implementing it.

Notes:

- The EFFI-Flex2-IP67 UV365 comes with one possible configuration: transparent window and lens position at P0 (90°) (i.e. no lenses)
- The transparent window for this reference is a special made transparent window for UV365. The standard transparent window of EFFI-Flex2-IP67 is not compatible with this configuration.
- Linescan film and standard polarizer are not compatible with UV365.
- For maximum performances, please use a cable with no longer than 5m. Otherwise, the overdrive performances may be impacted.
- For energy consumption, expect 12% less compared to the standard version.

Pure UV option

Used with the EFFI-Flex2-IP67 UV 365, the Pure UV technology is an innovative system that drastically improves the fluorescence effect while concurrently removing glare and improving contrast.

Note: The Pure UV light must be used along with a UV Cut filter on the camera.

Cylindrical lens

The additional Cylindrical lens (CYL) allows to focus even more the light into a very bright line.

ANNEX 2 - OTHER LED DENSITIES

The standard LED density for the EFFI-Flex2-IP67 is one LED every 20mm. However, we propose two other LED densities:

- L2 - Economical version : We put one LED every two slots (every 40mm).
- X2 - High light uniformity : We put one LED in between each standard LED (every 10mm).

Those modifications change the power consumptions and the light uniformity. For these references refer to the datas below.
